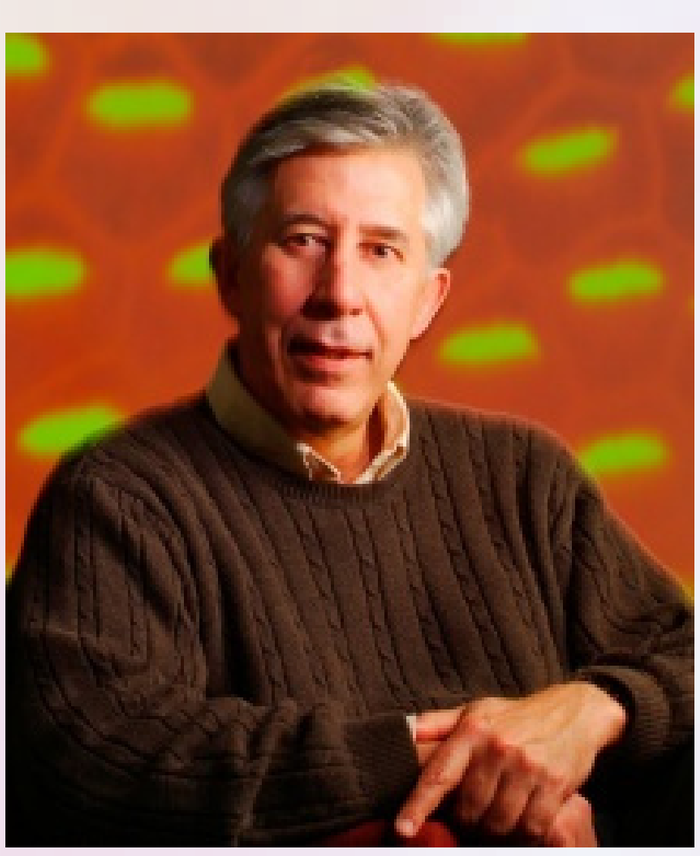
開放本會學員免費上線

實體課程開放名額25位學員，歡迎報名

https://forms.gle/qPfwhhvJz83cLjEa9

現場備有咖啡，因響應環保，請自備環保杯



講師介紹

Richard J. Salvi, PhD

SUNY Distinguished Professor of Communicative Disorders and Sciences
University at Buffalo College of Arts and Sciences

Richard J. Salvi is the co-founder and director of the University at Buffalo's Center for Hearing and Deafness, one of the country's foremost hearing research groups. His lab focuses on multiple areas in the field of hearing and deafness.

Salvi was among the first researchers to use brain imaging techniques such as PET scans and Functional MRI studies to help identify which regions of the brain were involved with tinnitus. He is an expert on the plasticity of the central auditory system, the effect of sensory hair cell loss on auditory function, noise-induced hearing loss, tinnitus, hyperacusis and auditory perception.
